This figure displays a 3D reconstruction of a protein complex, likely a viral capsid, showing a hexameric arrangement of subunits. The structure is composed of several domains, including a base, a body, and a tail. The subunits are colored in various shades of blue, green, and yellow, indicating different regions or states. The overall shape is roughly spherical with a hexameric symmetry. The image is a high-resolution 3D reconstruction, possibly from cryo-EM, showing the atomic details of the protein structure.

Key features and labels visible in the image include:

- Subunit Labels:** Individual subunits are labeled with numbers (1-6) and letters (A-F) to denote their position and identity within the hexamer.
- Domain Labels:** Specific structural domains are labeled, such as "Base", "Body", and "Tail", indicating the functional or structural regions of the protein.
- Hexameric Symmetry:** The arrangement of six subunits around a central axis demonstrates the hexameric symmetry of the complex.
- Color Coding:** Different colors (blue, green, yellow) are used to highlight specific regions or conformational states of the subunits.
- Atomic Detail:** The image shows a high-resolution view of the protein surface, with individual atoms and side chains visible.
